## **DETAILED ACTION**

### ***Status of Claims***

1. Claims 1-39 are pending.
2. Claims 1-39 are rejected.

### ***Information Disclosure Statement***

3. The information disclosure statement filed May 21, 2002 fails to comply with 37 CFR 1.98(a)(3) because it does not include a concise explanation of the relevance, as it is presently understood by the individual designated in 37 CFR 1.56(c) most knowledgeable about the content of the information, of each patent listed that is not in the English language. It has been placed in the application file, but the information referred to therein has not been considered. This is in response to those references, which did not have an English language equivalent, abstract or a concise explanation of the relevance.

4. The information disclosure statement filed May 21, 2002 fails to comply with 37 CFR 1.98(a)(2), which requires a legible copy of each U.S. and foreign patent; each publication or that portion which caused it to be listed; and all other information or that portion which caused it to be listed. It has been placed in the application file, but the information referred to therein has not been considered. In particular, this information disclosure statement did provide copies of the nonpatent literature.

***Claim Rejections - 35 USC § 103***

5. The following is a quotation of 35 U.S.C. 103(a) which forms the basis for all obviousness rejections set forth in this Office action:

(a) A patent may not be obtained though the invention is not identically disclosed or described as set forth in section 102 of this title, if the differences between the subject matter sought to be patented and the prior art are such that the subject matter as a whole would have been obvious at the time the invention was made to a person having ordinary skill in the art to which said subject matter pertains. Patentability shall not be negated by the manner in which the invention was made.

6. The factual inquiries set forth in *Graham v. John Deere Co.*, 383 U.S. 1, 148 USPQ 459 (1966), that are applied for establishing a background for determining obviousness under 35 U.S.C. 103(a) are summarized as follows:

1. Determining the scope and contents of the prior art.
2. Ascertaining the differences between the prior art and the claims at issue.
3. Resolving the level of ordinary skill in the pertinent art.
4. Considering objective evidence present in the application indicating obviousness or nonobviousness.

7. Claims 1-39 are rejected under 35 U.S.C. 103(a) as being unpatentable over Masferrer J. L. et al. Masferrer J. L. et al. disclose that the inhibition of the COX-2 enzyme will lead to the therapeutically desired inhibition of the generation of pro-inflammatory prostaglandins. Masferrer J. L. et al. also provide motivation to develop and or use selective nonsteroidal COX-2 inhibitors for the treatment of inflammatory diseases, including ocular inflammatory conditions, (see abstract). Although the prior art reference of Masferrer J.L. et al. do not recite specific COX-2 inhibitors, the skilled artisan is provided with the motivation to develop and or use selective nonsteroidal COX-2 inhibitors to treat ocular inflammatory conditions. Accordingly, one having ordinary skill in the art would have been motivated to use the teachings of Masferrer J. L. et al. to use COX-2 inhibitors to treat ocular inflammatory conditions.

Art Unit: 1614

8. Claims 1-39 are rejected under 35 U.S.C. 103(a) as being unpatentable over Miyake et al. of WO 9959634. Miyake et al. teach of the using selective COX-2 inhibitors to treat ocular inflammation. Although Miyake et al. does not recite specific causes of the inflammation, Miyake et al. do in fact teach the skilled artisan of a method of treating inflammation in the eye regardless of its causes. Clearly, the skilled artisan would have been motivated to utilize the selective COX-2 inhibitors of Miyake et al. to treat ocular inflammation without regard to its cause. The fact remains that the generation of prostaglandins is prevented with the administration of COX-2 inhibitors. For this reason, a variety of diseases and or conditions related to ocular inflammation could be treated with the compounds, which inhibit the generation of proinflammatory prostaglandins, such as with the administration of COX-2 inhibitors.
